MobileTravel Assist

ePassport data goes mobile

New generation of safe and innovative technologies

From family vacations to business trips, international travel has become more accessible. High passenger volumes have introduced challenges for travel ports and border control authorities alike. We have introduced a new generation of secure and innovative technologies to help guide the transformation of border security and enhance the entire travel experience.

To help make this a reality, Veridos has developed VeriGO MobileTravel Assist to enroll, protect, manage and use the data that has been retrieved from an electronic passport within a mobile app. Using this application, citizens can securely provide their personal information to government authorities and other trusted relying parties.

Meets international standards – just like a passport

VeriGO MobileTravel Assist is fully compliant with International Civil Aviation Organization’s (ICAO) digital travel credentials (DTC) for machine readable travel documents.

International Civil Aviation Organization (ICAO), a specialized United Nations agency tasked with the planning and development of safe international air transport, is in charge of ensuring the international compatibility of electronic travel documents, such as ePassports. This same regulatory body has specified how to use a passport data set electronically as a digital travel credential (DTC) for machine readable travel documents.

VeriGO MobileTravel Assist can be easily integrated into any existing website that wants to process reliable passport data. After downloading the mobile app, a traveler retrieves their personal information from an existing ePassport. The traveler’s personal data is securely stored in the app. The traveler can then remotely transfer this data to trusted relying parties in order to secure a remote service, such as applying for a visa online.

How does it work?

It’s a simple two-step approach:

Step 1: Retrieve data

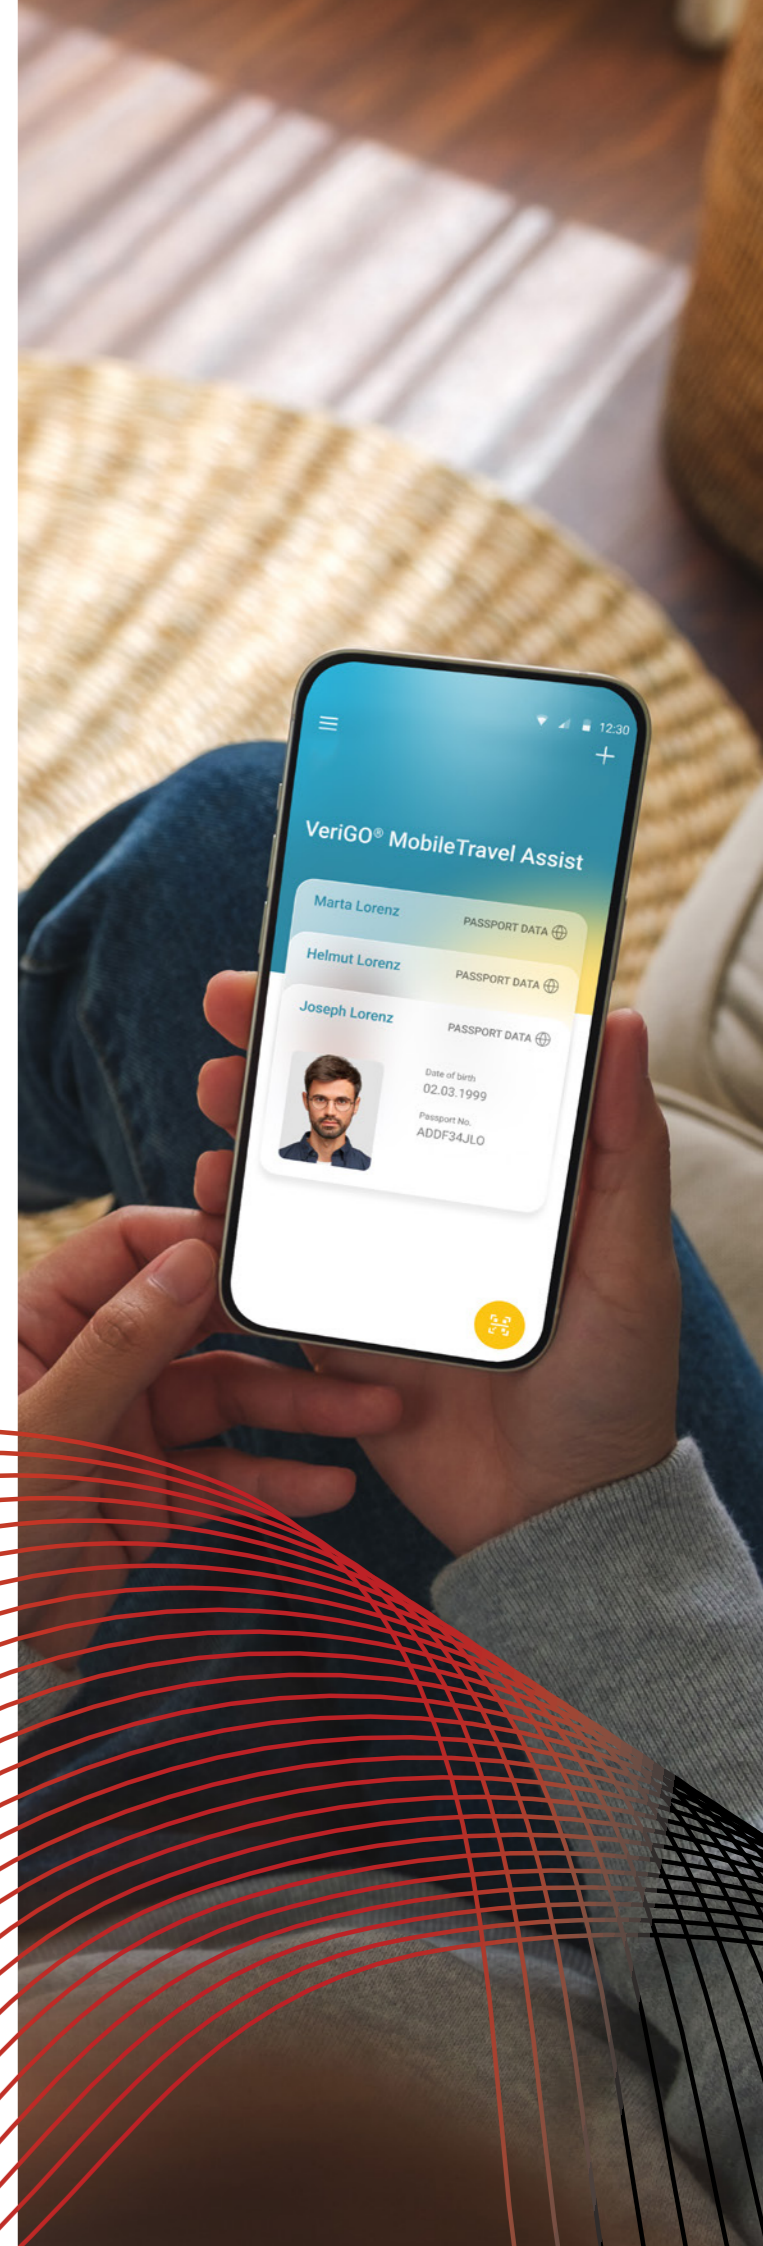

Firstly, a traveler is prompted to download and install the VeriGO MobileTravel Assist app on their mobile phone in order to complete a transaction.

The traveler then retrieves the data from their ePassport and stores it securely using VeriGO MobileTravel Assist on their mobile phone. The traveller can add additional data sets, such as those of from family members.

Step 2: Transfer to website

In case that the traveller is accessing a service on a desktop browser, the website generates a QR code. The traveller opens the VeriGO (R) Mobile Travel Assist app on the smartphone and captures the QR code to establish a secure connection.

Once the VeriGO MobileTravel Assist app has successfully connected to the website, the selected passport data sets can be securely transmitted.

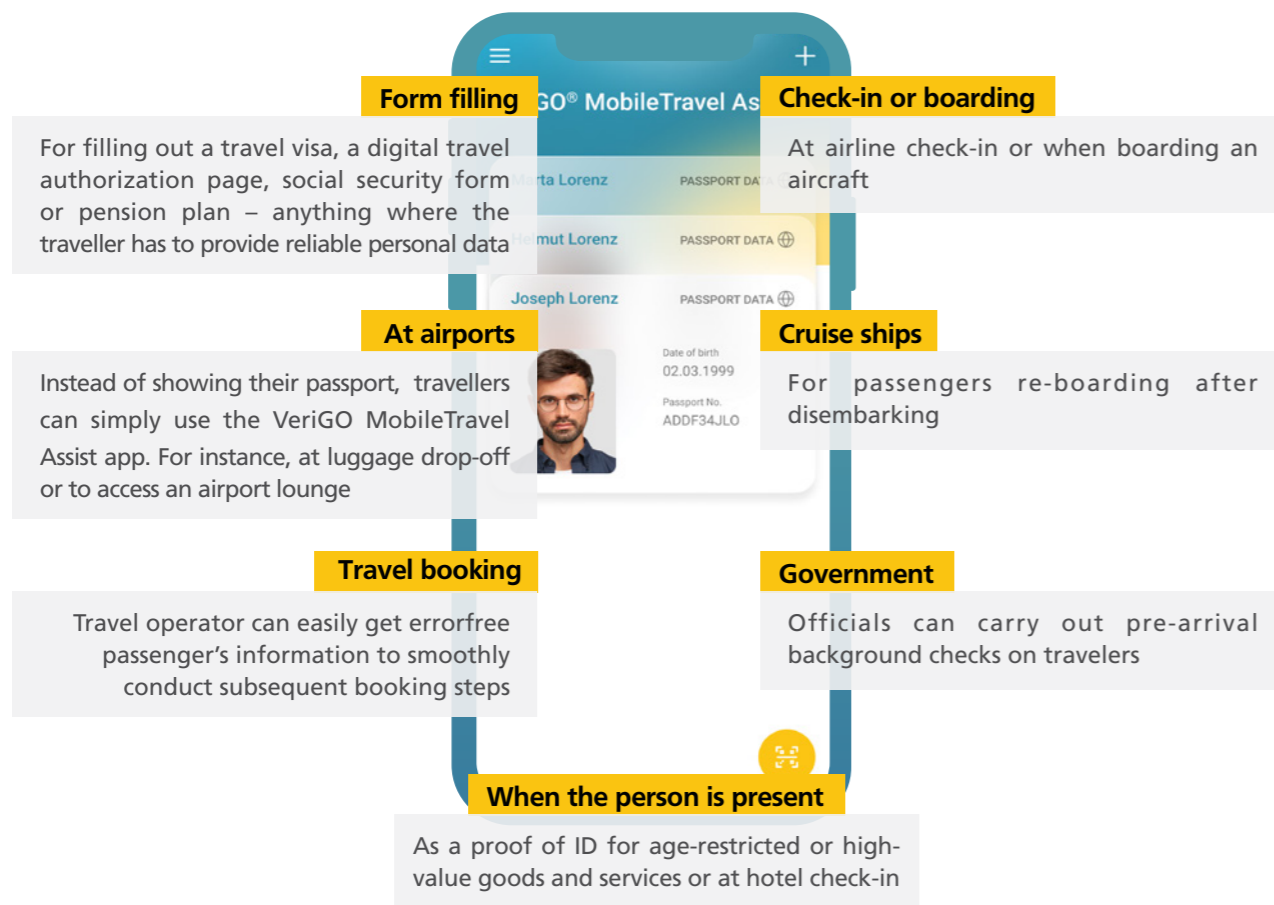

Who can use VeriGO MobileTravel Assist?

Any registered relying party.

Relying parties can be any organization which offer digital services and need a reliable source of data to process the citizen's request. For example, government authorities, border services or airlines can all benefit from the use of a passport data set. The app is available for both, Google Android and Apple iOS operating systems.

The app can be used in a variety of scenarios:

What are the benefits?

VeriGO MobileTravel Assist provides higher quality data for background checks of individuals. This means less manual work and greater accuracy, thereby saving time and effort. This all adds up to a more seamless travel experience.

- 01** Low integration costs
- 02** Secure transmission based on latest security technology
- 03** Only connects with trusted third parties
- 04** Easy to use
- 05** Works with any ICAO compliant electronic travel document
- 06** No changes to existing business flows. Just hook it in at an existing step.

VeriGO MobileTravel Assist helps airlines, airports and government authorities to improve their security and efficiency while offering passengers a safer, seamless travel experience.
