VeriCHECK eGate

The secure, speedy, reliable self-service automation

border control solution

www.veridos.com

The secure, speedy, reliable self-service automation border control solution

VeriCHECK eGate enables the efficient management of immigration processes at a country's entry and exit points to deal with high volumes of travelers or ease peak passenger flows at airports, land and sea borders.

Based on a new two-step eGate concept, the Veridos solution employs both travel document and biometric (face and fingers) verification. The eGate monitoring application for border control officers provides a consolidated view of events, status and live video surveillance of the eGate lanes.

VeriCHECK eGate's exclusive and stylish design has been customized according to customer requirements. Its optimized user interface guarantees ease of use, high passenger throughput and high user acceptance rates.

Already successfully deployed at Luxembourg and Bangladesh international Airports, our VeriCHECK eGates lead the border automation market.

| KEY ADVANTAGES

The VeriCHECK eGate is a cornerstone of Veridos's comprehensive suite of Border Control Solutions. Its features include:

- Integrated full document (ePassports and eIDs) verification and a biometric matching process
- An efficient two-step approach
- Best components for biometric matching and passport verification, tailored according to customer needs
- Intuitive to use, even for untrained passengers
- Enhanced security features e.g., tailgating detection
