VeriGO® Inspection Kit

Reliable and efficient on the go border inspection

Securing all borders – any place, any time

The VeriGO® Inspection Kit is the perfect enhancement to the VeriGO® Border Control Solution (BCS). This portable kit is used in situations when it is not possible or appropriate to have a permanent or stationary inspection station. It integrates perfectly with the VeriGO® BCS solution and it even supports offline border inspections.

Flexibility without compromise

Border inspection using a mobile inspection kit is exactly the same process as when using a permanently installed VeriGO® Border Control Inspection station. Any data held on the laptop is secured on an encrypted hard disk. The application and its data can only be accessed via modern two-factor log-on authen-tication.

All-in-one solution

The VeriGO® Inspection Kit consists of a rugged and secure splashproof case that contains all the equipment required for border inspections. The kit can also work offline by securely replicating the required data on the local hard disk. Each Mobile Inspection Kit is assigned a VeriGO® Border Control System (BCS) server at a designated border control site. Collected data can only be uploaded here, and replicated data is automatically updated upon connection.

Easy operation

The border inspection team can set up a temporary border control point as soon as they arrive: aside from the case, they only need to set up a table, chairs, and any other required furniture. Alternatively, they can even use the trunk of their vehicle. Simply open the case, connect the power or just use the optional built-in battery, and you're ready to go.

| BENEFITS AT A GLANCE

An all-in-one mobile identity document verification solution including:

- Laptop with VeriGO® Border Control Inspection Client software

- 4-4-2 fingerprint scanner to digitally capture the fingerprints of the traveler

- Camera with integrated lighting to capture an image of the individual's face

- Optional: built-in battery pack that lasts up to 8 hours

- Rugged dust- and splashproof case that allows border guards to just open and go (IP 54 rating)

- Trolley for easy transport of the kit on wheels
