ID production solutions that guarantee sovereignty

and security for governments and their citizens

The ultimate assurance of your sovereignty

Managing production of ePassports, IDs and other security printed products within their country of issue gives governments the ultimate assurance of their sovereignty and of achieving and maintaining the highest security standards available today. Our team focuses on delivering standards that go above and beyond established norms.

We have a long record as a trusted partner of governments seeking advanced and secure identity solutions. As a joint venture between Germany's two leading providers of high-security technologies, Giesecke+Devrient and Bundesdruckerei, we bring centuries of experience, expertise and proven innovative flair to all stages of the project.

Veridos' esteemed references

With production plants across the world, Veridos, a joint venture between Giesecke+Devrient and Bundesdruckerei brings you unequalled access to specialist expertise and technical resources.

MRTD passports

18

countries have been provided with

ePassports

48

countries have been provided with

ID & driver's licenses

3

countries have been provided with

ID card & ePassports production plants

What are the steps towards having your own ID factory?

Ideation & consulting

Each project is unique, which is why we begin with a 360° analysis of your project objectives. This covers current production processes, if any, all the way through to your likely future requirements. Our highly experienced team of experts then develop an end-to-end solution carefully tailored to match these needs. We discuss optimum scenarios in terms of equipment, processes and consumables in detail with you before agreeing on the final plan.

Whether your new facility is going to be a green-field project or located within an existing building, we will work closely with you to ensure that all the major areas and functionalities are agreed through an iterative design process.

Planning & engineering

Our experts specify all details of production, from machinery and processes to the planning of the building and the surrounding infrastructure. Physical and logical security, such as IT security, are key aspects of the project.

All steps will be aligned with your individual objectives to give each factory its unique characteristics, including:

- the desired product specifications and quantities
- optimization of the production process
- potential future expansion
- production flexibility
- production efficiency and cost effectiveness
- sustainability

Procurement & logistics

We negotiate contracts with the selected manufacturers and manage all aspects of equipment acquisition and its delivery to the new plant. Based on the availability of materials and lead times, we also plan the logistics needed to ensure that all essential materials reach your plant on time to maintain continuity of production.

Implementation, knowledge transfer and training

We create local jobs by hiring local employees and we give them the knowledge and skills they will need to manage the entire process when your factory goes into production.

This approach creates employment opportunities well in advance of commissioning and has the added bonus of helping your workforce acquire levels of production accuracy and efficiency to the very highest international standards.

We facilitate the acquisition of all relevant certifications for your new ID factory to guarantee that every production process you employ and every ID document you produce will consistently meet the highest international security and quality standards.

We will help you build state-of-the-art production facilities, as efficient as they are maintainable, to meet both your current and your future needs.

Full-fledged solution for today and tomorrow

Veridos has both the capacity and the expertise needed to meet the evolving needs of your country. A leading innovator in all aspects of secure ID production, we will work in close partnership with you. You will have access to our expertise across the entire spectrum of security document production, including ID cards and passports.

As well as helping you develop state-of-the-art production facilities, Veridos can also provide holistic identity solutions to enhance your current ID infrastructure. These include a range of border control products that ensure quick and accurate authentication at all checkpoints.

Our Veridos Border Control System is modular, flexible and scalable.

In addition to producing secure and trusted physical documents, governments throughout the world are also increasingly reaping the benefits of providing digital access to their services, or eGovernment, as it is known. These benefits range from greatly reducing administrative costs, such as the cost of document renewal, for example, to providing remote access to a full range of public services for virtually every citizen. Here, too, Veridos is leading the way, helping governments like yours create the credentials that underpin trusted eGovernment platforms.
