Veridos driver's license solution

The complete solution for modern driver's licenses

www.veridos.com

One document with multiple uses

The driver's licenses represents much more than a qualification to drive a motor vehicle. In many countries, they serve as a citizen's primary form of government-issued photo identification. Veridos increases the security of driver's license programs through enhancements to issuance and verification platforms backed by high-quality documents.

As a key component of the overall identity infrastructure, it is vital to increase the effectiveness, efficiency, and convenience of driver's licenses and related infrastructure for the benefit of public authorities and license holders alike.

HIGH-SECURITY DRIVER'S LICENSES

Veridos' extensive experience in high-security documents and production techniques underpins our sophisticated ID production portfolio.

Our document experts have access to a full suite of innovative technologies that combine state-of-the-art security features and advanced chip operating systems to provide our customers with documents uniquely suited to their needs.

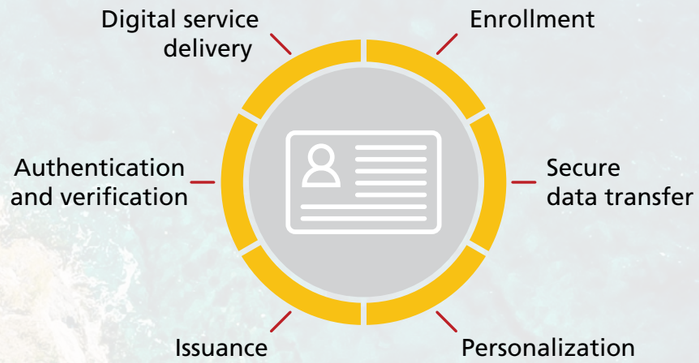
Veridos driver's license cards conform to the latest international standards for driver's licenses – ISO 18013 and EU Directive 2006/126/EC – as well as the highest safety and quality standards.

FULL DOCUMENT LIFECYCLE SYSTEM

Veridos offers end-to-end lifecycle management services for driver's license issuing authorities and law enforcement.

Our IMAGO framework application manages all aspects of driver's license issuance from enrollment and high-quality image capture through to personalization and issuance.

Veridos also provides tools and technology to efficiently detect and verify genuine identity documents.



Be prepared for the future with a mobile driver's license

VeriGO® DriveID is a smartphone-based driver's license solution with smart backend system. The driver's license data is pulled from the database and made available through our secure application.

The digital driver's license can be presented for contactless verification upon inspection. Contactless authentication means the process is not reliant on the visual inspection of security features by verifying personnel, but rather the establishing of cryptographic trust by allowing the system itself to verify the document.

Mobile driver's licenses offer numerous benefits to citizens and countries alike. Available both on and offline, our digital driver's license is built with the user in mind. Minimizing the data shared when appropriate, for authorization or age verification purposes. All users can trust that the digital ID is always valid and current.

Driver's licenses that are secure and trusted
